

Results of a survey conducted to determine the quality of professional practice and organization of students of Korkyt Ata Kyzylorda University

The purpose of the study is to determine the organization of professional practical training at the University and the quality of conducting classes in the form of dual training.

Research objectives:

- Satisfaction with the place of practice, compliance with the qualifications of the base of Professional Practice;
- Satisfaction with the quality of development of methodological guidelines contained in the practice program;
- The ability to use workshops, laboratories, etc. on the basis of practice;
- Assessment of assistance in passing the internship provided by the head of the practice of the profile organization where the internship took place;
- Students consider the theoretical knowledge gained at the university to be sufficient;
- Conducting classes with the involvement of employers;
- Awareness that education is organized at the University according to the dual training system;
- Training of the requested persons in some enterprise/organization within the framework of the basic educational program on the dual training model;
- Providing opportunities for the formation of professional skills necessary for the profession in the system of professional practice or dual training;
- Continue your labor activity in the future in an organization that has undergone professional practice or dual training;
- Assessment of the results of professional practice or dual training in terms of its effectiveness;
- Satisfaction with general professional practice or dual training;
- The forecast of employment as a young specialist at the place of professional practice is determined, etc.

Object of research: students of 5 Institutes of the University.

Time of study: 2024

Research sample:

313 respondents. Including in the survey:

- On the Institute of pedagogy and Traditional Arts-48;
- According to the Institute of Natural Sciences-43;
- Humanitarian and Pedagogical Institute-36;
- Institute of Economics and Law-62;
- According to the Institute of engineering and technology – 124 answered.

The method used in the study:

The survey was conducted using the "face to face" method. The survey methodology allows you to obtain a large amount of information from the respondent with the highest degree of accuracy. The questions under study are revealed quite fully during a personalized interview. An individual request is made by professional interviewers without the participation of a third party.

The data obtained through the survey process from respondents are subjected to statistical processing and analysis. The answers of the respondents who answered the questions of the research questionnaire based on the results of the request to the customer are provided in the form of a report, distributed in the form of graphs and tables.

Methodology used in the study:

A standard questionnaire of 35 questions, compiled in accordance with the objectives of the study.

The questionnaire used in the course of the study was compiled by specialists of the service group for information and expert work.

Since the questionnaire is filled out together with a specially trained individual interviewer, it allows you to increase the completeness of the initial social data and the process of accuracy.

Recommendations of students on the organization and passage of professional practice or dual training

- Improve practical skills for the successful performance of professional functions;
- Consider the possibility of passing an internship, expanding the scope of practical training;
- Provision of places of professional practice and distribution of work after training;
- Strengthening ties between the University and the enterprise;
- Solving the shortage of internship production facilities;
- Extension of practice time;
- Provide students with a free opportunity to undergo professional practice at their future place of work (if any), that is, to choose the place of professional practice strictly according to the list prepared in advance, allowing them to visit institutions that are not in the register;
- Introduction of professional practice in the educational process from the 1st year.
